AETHER / PRIVATE AI TRADING AGENT

A private AI trading agent that remembers how you think.

Aether gives serious discretionary traders one private system for chat, memory, desk state, journal capture, chart context, watchlist discipline, tasks, and routines. It is decision support with continuity, not another chat window that forgets everything overnight.

Most traders do not lose edge because they lack information. They lose edge because their process fragments across screenshots, notes, chats, and half-remembered reasoning. Aether keeps the desk narrative alive across sessions so planning, execution, and reflection stop resetting.

WHAT THE CLIENT ACTUALLY GETS

Chat-First Agent

Work with Aether through persistent threads and live conversation instead of starting from scratch each session.

- Discord / Telegram compatible workflow
- Persistent thread continuity
- High-context decision support

Memory That Compounds

Desk state, journal entries, watchlist, and chart context stay connected so the system becomes sharper with use.

- Journal capture from threads
- Related memory surfaced in context
- Trading process preserved over time

Live Desk Layer

Use the full control surface when you want the complete picture, not just the chat layer.

- Desk state and routines
- Watchlist and task triage
- Chart upload and attachment

Trading-Serious Support

Aether is built to help structure context, invalidation, risk, and review loops for discretionary trading.

- Not a signals bot
- Not auto-execution
- Not generic AI chat

BEST USE CASES

Morning Prep

Set desk focus, bias, no-trade conditions, levels, and run a routine before the session begins.

Trade Idea Refinement

Talk through setups with chart context, tighten invalidation, and keep the logic attached to the thread.

Journal Without Friction

Turn live conversation into notes, reflections, or trade ideas while the thinking is still fresh.

Ongoing Process Discipline

Keep watchlist, tasks, and desk posture honest instead of letting them drift across multiple tools.

ENGAGEMENT OPTIONS

TIER 1

Private Agent

One private Aether deployment for a serious trader who wants continuity, structure, and memory.

- Single-tenant deployment
- Chat channel setup
- Desk and memory configuration

TIER 2

Premium Agent

The same core product with deeper customization, tailored routines, and higher-touch support.

- Custom workflow tuning
- Tailored routines and voice
- Priority support

TIER 3

White-Label Partnership

A branded commercial deployment model for coaches, mentors, and boutique trading brands.

- Branding and identity layer
- Managed branded deployments
- Commercial licensing structure

Best fit: discretionary traders, mentors, and boutique operators who already take process seriously and want a private AI agent that can hold context across sessions.

Decision support and operational memory only. Aether does not execute trades or guarantee outcomes.
